INFORMATION

FOR MOTORCYCLE AND CYCLING PROTECTORS

The CE MARKING on your product means that this product has passed an EU Type Certification procedure according to Regulation (EU) 2016/425 through the laboratory tests required by the European Technical Standard EN1621-1: 2012 at the Notified Body no. 0498 RICOTEST (Via Tione 9, 37010 Pastrengo VR - Italy) and therefore is to be classified as a Personal Protective Equipment of CAT. 2 (medium risks). For further information on Certifications (Regulation - Notified Body) see the relative declaration of conformity (on our web page https://marketing.acerbis.it).

TAB.1

PROTECTOR CODE	TYPE OF PROTECTOR	POSITION
KNEE GUARD IMPACT PRO	K TYPE A	KNEE

Put the protector on. Position the protector in a way that the shape of the protector fits the body area protected. Check that it is in perfect condition and complete; if this is not the case, replace it. We recommend the user to choose the protector of the level suited to his driving style and the type of motorcyclist, then the level of danger of possible accidents that may result Whereas:
- Level 2: provides maximum performance and safety, therefore, may have a lower level of comfort
- Level 1: is the one that offers protection for a driving style standards, maintaining the highest level of comfort possible.

In order to obtain the certification of level 2 (the highest standard), it is necessary that the impact borne by the protector has an energy of 50 J. In addition, the average force of impact of all strokes, transmitted and measured on the inside of the protector, must not exceed 20 kN. None of these impacts, taken individually, should exceed 30 kN.
For level 1, the average force of impact transmitted inside the protector can not exceed 35 kN, and no single impact should exceed 50 kN.

RISKS/PROTECTION LEVELS

The protectors offer a LIMITED PROTECTION against RISKS OF IMPACT in case of falls. This protection is ensured only in case of correct positioning:
- **This protector reduces the severity of traumas caused by impacts**
- **No protector can offer total protection from all possible collisions!**
- **No protector can offer protection against traumas from twists or extreme movements**

USAGE LIMITATIONS

The use of the protector is limited to motorcycle and bicycle use. Do not use it for purposes other than those stated. Changes or modifications to environmental conditions such as temperature or humidity could significantly reduce the performance of the protector. Any modification, alteration or improper use of the original structure of the protector jeopardises the performance of its function. The manufacturer is exempt from any responsibility for any damage or consequence deriving from improper use.

STORAGE, MAINTENANCE, CLEANING AND DURATION

Store the protector in a dry and aired place. Do not cover it with heavy objects. After usage, leave the protector to dry in a ventilated place at room temperature. Do not iron, do not bleach, do not centrifuge. Clean it with a dry cloth. The materials used to produce the protector do not contain harmful substances. A result of many factors that may affect the useful life of a product's protection, you can not specify an expiration date on the product life. It depends on the frequency of use and from on how the user holds the device. It is advisable to asses their state of efficiency, frequently and in case it is required the replacement, it must be made within 5 years.

WARNINGS

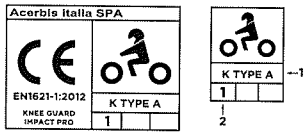

- The protector should be replaced immediately when it has suffered an obvious deformation or other type of damage or degradation.
- Always adjust the protector so that it fits tightly to the body part that requires protection.

WARNING AFTER USE

At the end of the life cycle, the device cannot be disposed of by incineration, but solely by mechanical destruction. Do not release in to the environment, but according to applicable regulations.

DISPOSE OF PROPERLY

MARKINGS

The markings are sewn on the protector.
Information concerning the markings is reported below:

CE The CE marking on the PPE indicates compliance with all the requirements of regulation (EU) 2016/425, Annex II

Acerbis Italia SPA Name of the manufactorer

The pictogram indicates that this product is intended for use by the motorcyclist.
1 = type and category of protection
2 = level of protection
If optional tests for maximum (+40°) and minimum (-10°) temperatures have been performed, the same protection level has been reached also by these optional tests. In case these tests have not been performed the corresponding space is vacant.For the exact model of your protection, refer to the column "type of protector" of Table 1.

KNEE GUARD IMPACT PRO Item designation

"S / E / H / K / K+L", are protectors that provide protection in different parts of the body:
S = provides protection in the area of the shoulders
K = provides protection in the area of the knees and upper tibia
E = provides protection in the area of the elbows and forearms
H = provides protection in the area of the hips
KL = provides protection in the area of the knees middle and upper tibia
L = leg below protectos "K"

"KNEE GUARD IMPACT PRO" type A
A and **B** indicate the dimensional requirements satisfied by the protector, where B is the most extensive area and A the least extended.
