

Mounting kit for Acerbis lever protectors

Assembly: see attached picture

Maintenance: regularly check that the screws on the mounting kit are tightened, in case of any damage, replace the mounting kit.

WARNING: Acerbis lever guards cannot prevent injury in the event of an accident. They have been designed to protect your hands from cold air and the impact of small twigs or flying stones. Make sure you follow the instructions shown in the illustration for fitting. Always check that the throttle and other controls are clear for operation before setting off.

Cut off the ends of both handles and the throttle plastic , so that you can install the spreader bolt (F) into the handlebars.

Make sure the throttle plastic does not jam. Use weaker washers on all screws. For tapered handlebars use the thicker end lock washers, for 22mm handlebars use the weaker end lock washers. Failure to follow the above instructions may affect the handling of the motorcycle, possibly leading to an accident.

Dispose of the product in an environmentally friendly manner at the end of its service life.
