

Oil for air filter

Store in a well-ventilated place, preferably outdoors.

Wear protective gloves and safety glasses when handling!

Mix well before use!

Instructions for use: pour the contents of this can into the special oil container. Make sure your air filter is completely clean and dry before fully immersing it in the oil. Leave the filter soaked until it soaks like a sponge. After that, squeeze the oil out of the filter thoroughly, but do not wring the filter. Repeat the process if necessary. The filter is now slightly stained. By "kneading" the filter and always wearing protective gloves, you can spread the oil evenly in the filter. Once the filter is a uniform blue colour, stop "kneading". Allow the filter to dry under a piece of cloth on in a well-ventilated place, preferably outside. After approximately two hours, the filter is ready for use. Store filters that you have already oiled in a plastic bag in a place where the sun does not shine.

WARNING:

Store out of reach of children. Highly flammable. Irritating to skin.

Harmful: risk of serious damage to health by prolonged inhalation. Toxic to aquatic organisms, may have long-term adverse effects on the aquatic environment. May damage internal organs if swallowed. Vapours may cause drowsiness and dizziness. Keep container in a well-ventilated place. Store away from food, drink and pet food. Do not pour oil down the drain, dispose of used material and can at a special collection point. Wear special protective clothing and gloves when handling. If ingestion occurs, seek medical attention immediately.

Dispose of the product environmentally at the end of its useful life.
