

Instructions for using the gear lever

Installation: check and note the location of the current controller. Remove the old shifter. Clean and lubricate all relevant parts on the motorcycle before installing the new shifter.

Before installing the new shifter, be sure to lubricate the inner teeth of the shifter, check the positioning and then slowly fit the new derailleur. Before tightening, lubricate the full length 9mm bolt and then tighten it so that the shifter is firmly in position. Once you have finished fitting the new shifter, clean off any excess grease and test that the shifter is indeed securely fitted before your first ride.

Maintenance: if any wear or damage occurs, the shifter must be replaced.

Riding a motorcycle with an improperly mounted shifter can be dangerous.

The manufacturer is not responsible for any injuries that may occur.

Environmentally dispose of the product at the end of its useful life.
